NTP Interagency Center for the Evaluation of Alternative Tox. Methods

April 10, 2005

Dear Mr Stokes,

This is our appeal to you to very seriously consider the complete abolition of the Draize method which has been in use for far too many years. There are to many more scientifically correct methods available for the study of the use of irritating and corrosive materials. The time is past due when midevil practices were abandoned and 21st century methods used.

Thank you for your serious consideration to save both humans and outmoded ~~not~~ non-human victims.

Very Sincerely and Humanely in Service.
